```

```
User@Diego:~/documents/resume/profile.txt
$ cat profile.txt
```

I'm a Fullstack developer in career transition, fully committed to building practical, real-world applications through consistent, focused, and self-directed learning. My current work involves designing and developing Fullstack systems using technologies like **Python, Flask, PostgreSQL, Flet, HTML, CSS, Docker, and RESTful APIs**. I've built a strong technical foundation in computer networks, web protocols, Linux, version control (Git & GitHub), and software architecture. All my progress is backed by hands-on projects, available on my GitHub.

In addition to technical skills, I bring valuable soft skills from previous freelance experience, such as **autonomy, adaptability, problem-solving, and clear communication**, which I apply in every aspect of my learning and development. I'm also leveraging AI tools to accelerate learning, improve code quality, and experiment with creative problem-solving techniques.

Currently focused on deepening my Fullstack expertise and contributing to meaningful projects. I'm open to opportunities where I can grow, collaborate, and turn knowledge into impact.
